

RIFTON ANCHORS

The Rifton Anchors are designed as short-term positioning aid to stabilise certain body parts so as to carry out defined task. These anchors are impervious to hard constant use.

Attached to a smooth, hard surface (either a table top or floor), the 4.5" diameter industrial strength suction cups will not slip or shift. These anchors include hand anchor, grab bar, wrist anchor, horizontal anchor and elbow anchor to suit individual needs.

RIFTON ARM ANCHOR

Arm Anchor Size	Small	Large
Right Hand	AK811	AK813
Left Hand	AK812	AK814
User size*, cm	19 - 30.5	25.5 - 38
Width of arm trough, cm	9	10
Overall length, cm	23 - 33	28 - 41

*Measure the distance from the inside of thumb to bended elbow and allow for growth.

The Arm Anchor from Rifton is commonly used in the M.O.V.E. Program. It helps to secure the forearm on any flat, smooth surface such as a table, tray or floor.

When the user's arm is secure and stable, it becomes much easier to work, play, interact socially and practice self-supporting skills.

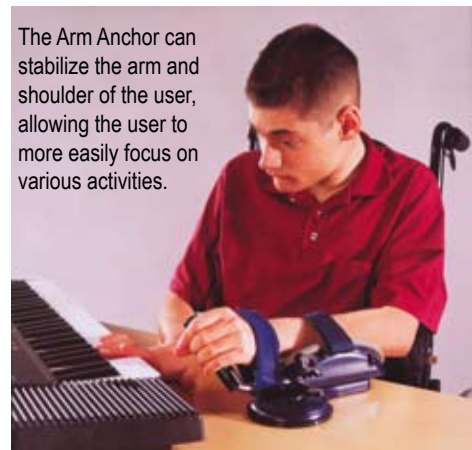

The industrial-strength 12 cm diameter suction cup comes with a locking lever for easy application and release. The comfortable padded armrest is from the *Pacer Gait Trainer* and comes with arm and wrist straps. The handhold extends in length and adjusts in angle for forearm rotation.

AK811 Small Right Arm Anchor

Arm Anchor comes in two sizes.

The Arm Anchor can stabilize the arm and shoulder of the user, allowing the user to more easily focus on various activities.
