

KAYE DYNAMIC STANDERS

The Kaye Dynamic Stander is not your regular vertical stander! It is designed to allow users to experience the everyday balance reactions that occur with standing. The Dynamic Stander allows for weight shifting of a full 360° while keeping the user safely secured in a standing position. A spring-loaded crank gives control over the extent of the movement, catering for individual needs. For upright standing, the Stander can be locked for stability. Use the Kaye Dynamic Stander to train users in different weight-shifting actions while standing, such as reaching, eating and self care activities. This gives secure postural control, yet frees users to experience more unrestricted movement.

Included with the Dynamic Stander is a tray for holding materials and activities. Additional components are Lateral Leg Supports and Leg Abductor.

ADS3, Small Kaye Dynamic Stander, shown with tray and Lateral Leg Supports.

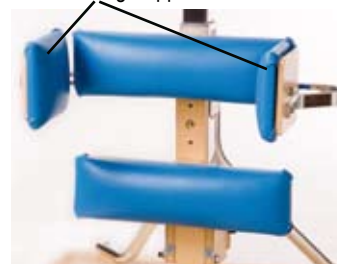

ADS3 small Kaye Dynamic Stander

ADS4 can be unlocked for motion.

Model No.	ADS3	ADS4
User size and weight range	2-10 y/o, 55kg	8 y/o- up to 188cm, 100kg
