

ELECTRIC HI-LO STANDING BOARD

This electrically operated Hi-Lo Standing Board facilitates the standing of a heavy teenager or young adult who requires extra posture support. It is now possible for just one person to stand a heavy patient, transfer from hoist or wheelchair, fix the straps and supports while the patient lies horizontally, then simply push the button to stand up. No need to struggle with manual lifting or holding while putting the patient on the stander. It comes with three straps (split legs), padding, and height adjustable footrest to suit a range of users. User height up to approx. 172 cm. Custom sizes are possible. Options include: Headrest, lateral support, abductor and adjustable tray.

The optional tray is height and angle adjustable to suit different users and activities.

The electric Hi-Lo Standing board P4801 with padding and straps (including split leg straps). Headrest and lateral supports shown are optional.

The Lateral Supports can be fitted on different slots providing better positioning and support.
