

LECKEY PRONE STANDER

Made in UK, this sturdy Dual Stander offers advanced features for standing.

Features:

- Tilts from vertical to 40° in 10° increments for gradual increase of weight bearing.
- Multiple adjustable Knee Plate with individually adjusted knee cups allows for precise positioning in terms of adduction and abduction.
- The well-designed footplate is very close to ground level for easy transfers. The attached sandals can be positioned in various angles and positions. The sandals are hinged so as to flip-back for easy fixing to the feet while the user is still sitting. It is much easier to transfer the user to the stander with the feet now in a supportive and fixed position on the footplate.
- Frame, knee plate, pelvic plate, and tray are all adjustable in height to cater for growth and different needs.
- Thickly padded Chest Plate with flexible, width adjustable lateral pad gives the child secure trunk support.

- The height adjustable pelvic plate has a special pelvic belt which can pull from one side thus allowing for some scoliosis correction and better trunk alignment.
- Tilting, height adjustable tray with bowl and cover cater for various therapy and playing activities.
- 4 double locking castors.
- Optional interface frame with head supports can be fitted to improve head and shoulder positioning and to control hyperextension.
