

LECKEY FREESTANDER

This upright stander is designed and manufactured in the UK to promote weight bearing and midline symmetry. It comes with heavy duty swivel and lockable castors for easy manoeuvrability.

One of the special features is the multi-adjustable chest support. It is height and angle adjustable. It comes with a thickly padded chest pad and a pair of width adjustable, wrap-around type soft padded lateral supports for maximum comfort. A safety belt is also included.

Another special feature is the multi-adjustable knee cups. The knee plate can be adjustable in height and tilt in angle. Each of the two knee cups can be positioned individually along the knee plate to provide the exact amount of adduction and abduction as required.

The opening of the base and low footplate allows for easier wheelchair transfer. The adjustable sandals come with Velcro fasteners to secure the feet. Sandal raisers are also available for those with different leg length.

The large and colourful tray can be adjustable in height and tilt in angle. Removing the top of the tray reveals a useful activity bowl which can be used in various activities.

A pelvic strap comes standard to achieve a good midline position, to rotate the child's pelvis and correct scoliosis. Using an optional interface frame, a head support can be fitted on the standing frame to improve head and shoulder positioning and control hyper-extension.

For a smaller child, the lightweight Totstander offers features such as multi adjustable knee cups and sandals similar to the Freestander. It is suitable for good postural positioning in the earliest stage of standing.

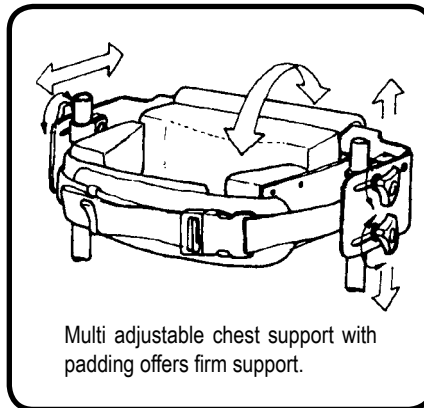

AFS/2 Freestander

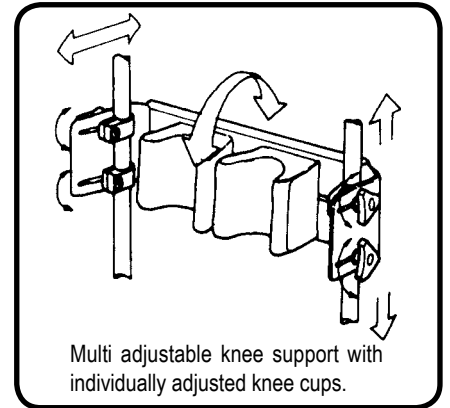

Adjustable trunk and knee supports.

Adjustable pelvic belt.

Multi adjustable chest support with padding offers firm support.

Multi adjustable knee support with individually adjusted knee cups.

similar to Freestander for smaller child.
