

## LECKEY SQUIGGLES STANDING SYSTEM

The Squiggles Standing System from Leckey is a three-in-one stander: upright, prone and supine. By removing the handrest and turning the footplate and sandals it can be changed from a supine to a prone stander. It can adjust in seconds to accommodate children between 1 and 5 years old who would benefit from standing. The Squiggles Standing System uses padded straps to secure pelvis, trunk, legs and feet. The innovative design allows adjustment of height, width, depth and angle of the pelvis and trunk supports. A choice of bright pad colours means that children will find the Squiggles fun to be around.

There are two frame (chassis) options for the Squiggles Standing System:

1. The *Standard Chassis* allows adjustment from vertical to 70° if the child is not in the frame during adjustment. The Standard Chassis is compact, without castors and is easily folded for storage.
2. The *Tilting Chassis* allows adjustment from vertical to horizontal continuously because of the gas struts, the child can be in the frame during adjustment. Also the *Tilting Chassis* is mounted on four lockable swivel castors, and is foldable for storage and transport.

Model Number	AOB-414089
User height range, cm	75 -111
User age (approx.)	1 to 5 years
User weight, kg	22
Support Length, footplate to axilla, cm	55 - 82
Chest Width, distance between laterals, cm	16 - 53
Trunk Width, cm	16 - 23
Hip Width, cm	16 - 53
Footplat Angle, Plantar flexion	10°
Footplat Angle, Dorsal flexion	10°
Tray Height, Prone, cm	55.5 - 82.5
Tray Height, Supine, cm	48 - 82.5
Stander Frame Weight, kg	7
Standard Chasis Inclination	90 ° - 170 °
Tilting Chasis Inclination	90 ° - 110 °

Squiggles Stander with Standard Chassis.

Contoured Headrest for greater head control.

Optional sandals for better posture support.

The Tilting Chassis option on the Squiggles Stander can be adjusted quickly from an upright to a horizontal position while the child is in the frame.
