

SEATING & TRANSPORT EQUIPMENT

MADITA FUN SEATING SYSTEM

MADITA-FUN is a modern integrative therapy chair by German company Schuchmann. It comes in three sizes for children from 12 months to kindergarten and primary school age.

- The large number of adjustment options like the intergrated backrest height adjustment, the seat depth and the width adjustment ensures this product grows with the child so it can be used over a long period of time.
- The seat angle is infinitely adjustable by gas spring with one hand.
- With the telescopic footrest the height of the MADITA-FUN can be adjusted down to the ground. Hereby the transfer from the wheelchair or the playground can be done independently.
- Based on the MADITA-FUN therapy chair customised body shapes can be integrated.
- Fun blue/orange fabric design.
- Back tubes without pushing handle.
- Headrest to support head.
- Side and hip support pads.

For individual care the modular conception of sizes and a big selection of options and accessories is available

Height and side adjustable side support pads, as option with swing away mechanism

Height and angle adjustable armrests and hip support pads

The seating position is easy to lower from table height to play height assisted by a gas spring. This allows integrative work with same-age children and siblings

Madita-Fun Size 1 with head and footrest, and side and hip support pads.

Seat and backrest angle adjustment for active or passive position
